## Lexium 32 Servo drives

### Presentation of the range

PF080934

Lexium 32 servo drive controlling a packaging machine

PF080932

Lexium 32 servo drive controlling a handling machine

PF080933

Lexium 32 servo drive controlling a materials processing machine

### Presentation of the range

The Lexium 32 range of servo drives includes 4 servo drive models, LXM32C, LXM32A, LXM32M and LXM32S, associated with 2 servo motor ranges, BMH and BSH models for optimum use that can adapt to demands for high performance, power, and simplicity of use in motion control applications.

It covers power ratings from 0.15 to 11 kW.

The Lexium 32 servo drive offer is designed to simplify the life cycle of machines. SoMove setup software, side-by-side mounting, and color-coded plug-in connectors, easily accessible on the front panel or on top of the servo drives, all help to make installation, setup, and maintenance easier. Maintenance is also quicker and cheaper thanks to the new duplication and backup tools, such as the memory card. Please consult our catalog "SoMove, Setup software for motor control devices".

Performance is improved through optimized motor control achieved through reduced vibration with automatic parameter calculation, a speed observer, and an additional band-stop filter. This optimization helps to increase machine productivity.

The compact size of the servo drives and servo motors provides maximum power in the minimum space, which helps to reduce overall machine size and costs.

Integrated communication or optional communication cards, depending on the model, as well as standard encoders, enable adaptation to numerous types of control system architecture for industry.

An integrated safety function and access to additional safety functions reduce design times and make it easier to comply with safety standards.

### Applications for industrial machines

The Lexium 32 servo drive incorporates functions which are suitable for common applications, including:

- Printing: cutting, machines with position control, etc.
- Packaging and wrapping: cutting to length, rotary knife, bottling, capsuling, labeling, etc.
- Textiles: winding, spinning, weaving, embroidery, etc.
- Handling: conveying, palletization, warehousing, pick and place, etc.
- Transfer machines (gantry cranes, hoists), etc.
- Clamping, "on the fly" cutting operations (flying shear, printing, marking), etc.
- Materials processing

### The offer

The Lexium 32 range of servo drives covers motor power ratings between 0.15 kW and 11 kW with three types of power supply:

- 110...120 V single-phase, 0.15 kW to 0.8 kW (**LXM32••••M2**)
- 200...240 V single-phase, 0.3 kW to 1.6 kW (**LXM32••••M2**)
- 208...480 V three-phase, 0.4 kW to 11 kW (**LXM32••••N4**)

### Compliance with international standards and certifications

The entire range conforms to international standards IEC/EN 61800-5-1, IEC/EN 61800-3, is UL and CSA certified, and has been developed to meet the requirements of directives regarding protection of the environment (RoHS) as well as those of European Directives to obtain the CE mark.

### Compliance with electromagnetic compatibility (EMC) requirements

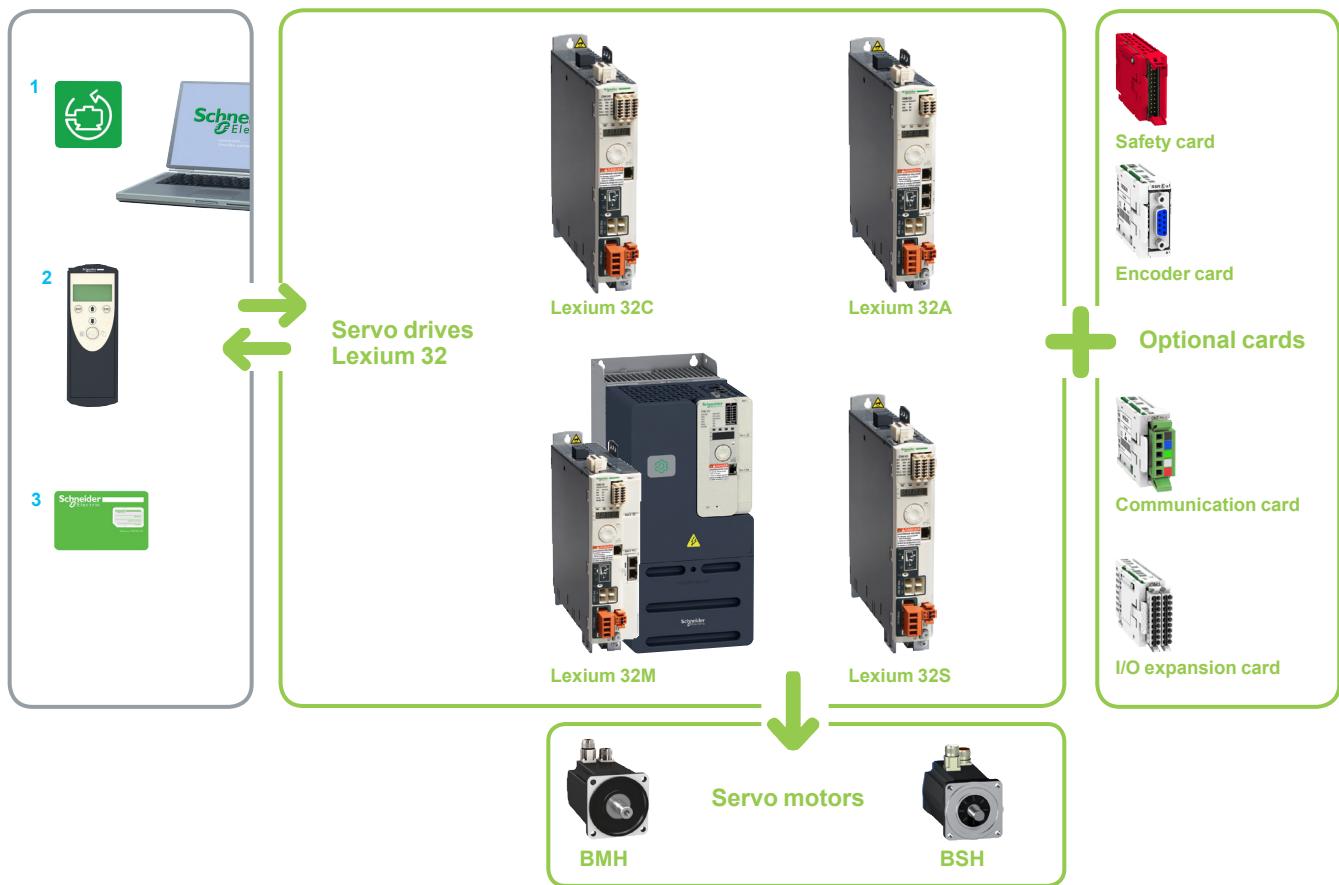

The integration of a category C3 EMC filter in Lexium 32 servo drives and compliance with EMC simplify installation and make it very inexpensive to bring the device into conformity to obtain the CE mark.

Additional filters, available as an option, can be installed by the customer to reduce the level of conducted and radiated emissions (see page 28). They also enable the servo drive to be used with cable lengths of up to 100 metres/328 feet, to meet the requirements of applications in a wide variety of fields.

### Accessories and options

External accessories and options such as braking resistors, line chokes, etc. enhance this offer.

#### Simplicity, from installation to maintenance

#### SoMove setup software 1

SoMove setup software is used in just the same way as it is on other Schneider Electric drives and starters, to configure and optimize control loops in automatic or manual mode using the Oscilloscope function and for maintenance of the Lexium 32 drive. It can be used with a Bluetooth® wireless connection (see page 11).

#### Multi-Loader tool 2

The Multi-Loader tool enables configurations to be copied from a PC or a servo drive and loaded onto another servo drive. The servo drives can be powered-down (see page 11).

#### Memory card 3

This stores the servo drive parameters. When replacing a Lexium 32 servo drive, this function helps to ensure immediate startup by removing the need to program the drive. This optimizes maintenance time and reduces costs (see page 11).

#### Auto-tuning

Adapted to each user, the 3 auto-tuning levels - automatic, semi-automatic, and expert - allow you to achieve a high level of machine performance, whatever the application.

#### Human-Machine Interface (HMI)

The display can be used to control and configure the servo drive, display states and detected faults, access parameters and modify them in manual mode using the navigation button.

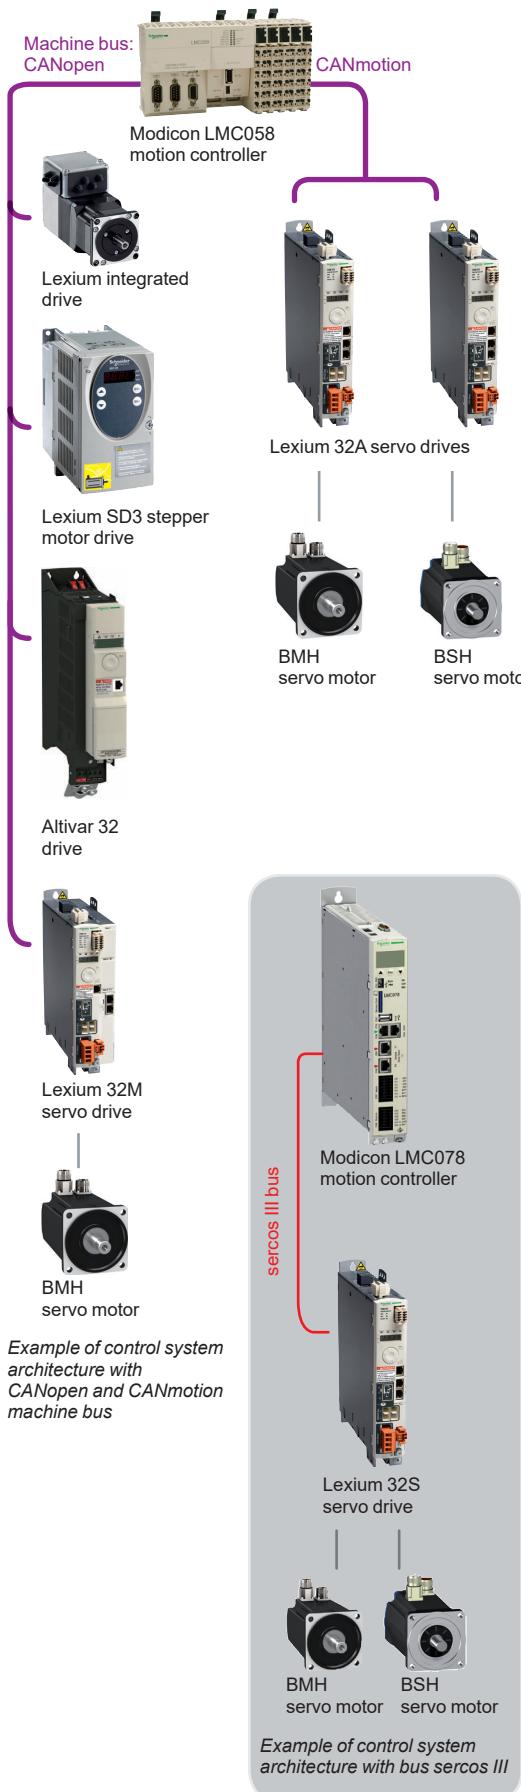

#### Mounting and maintenance

Several Lexium 32 servo drives can be mounted side by side to save space. Connecting the servo drives is simplified by color-coded plug-in connectors, which are easily accessed on the front panel or on top of the drive.

SoMove setup software, Multi-Loader configuration tool, Memory card

Configuration with the SoMove setup software via Bluetooth®

### SoMove setup software

SoMove setup software is used on Lexium 32 servo drives in just the same way as it is on other Schneider Electric drives and starters, to configure, adjust, debug, and maintain the drive.

It communicates via a Bluetooth® wireless link with the servo drive, which is equipped with the Modbus-Bluetooth® adapter (VW3A8114).

It can be downloaded from our website [www.schneider-electric.com](http://www.schneider-electric.com) or is available on the "Description of the Motion & Drives Offer" DVD ROM (VW3A8200).

For presentation, description, and references, please consult our catalog "SoMove, Setup software for motor control devices".

Configuration of a Lexium 32 in its packaging with the VW3A8121 Multi-Loader tool + VW3A8126 cordset

### Multi-Loader configuration tool

The Multi-Loader tool enables several configurations to be copied from a PC or a servo drive and loaded onto another servo drive.

The Lexium 32 servo drives do not need to be powered up.

### CANopen and CANmotion machine bus for Lexium 32A servo drives

Lexium 32A servo drives can be directly connected to the CANopen machine bus using an RJ45 connector. To simplify daisy chain connection, each servo drive is equipped with two connectors of this type (marked CN4 and CN5).

The communication function provides access to the servo drive's configuration, adjustment, control, and monitoring functions.

Used with a Lexium Controller motion controller, the CANmotion bus can be used to control motion for applications with up to 8 Lexium 32A servo drives.

- Saline atmosphere
- Significant temperature variations
- Operating temperature between - 10 °C/+ 14 °F and + 70 °C/+ 158 °F

# Lexium 32 and Motors

## Lexium 32 Servo drives

CANopen/CANmotion machine bus

Lexium 32A servo drives integrate the CANopen communication protocol as standard (see page 13).

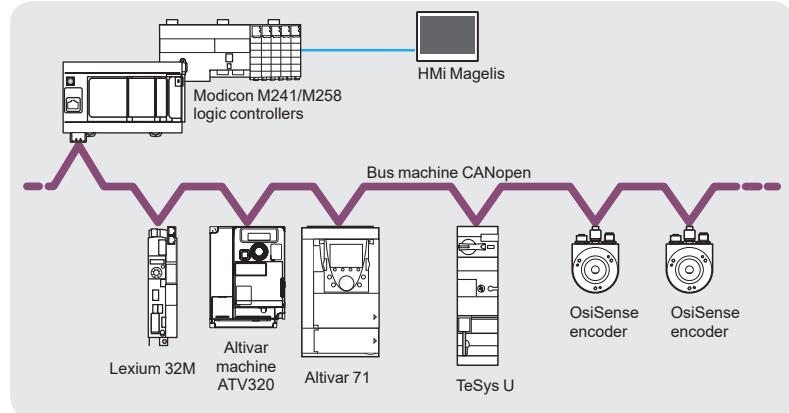

If one of the communication cards (available as options) is added, the Lexium 32M servo drive can be connected to the following communication buses and networks:

- CANopen and CANmotion machine bus
- PROFIBUS DP V1 fieldbus
- DeviceNet fieldbus
- EtherNet/IP network
- EtherCAT fieldbus
- PROFINET fieldbus
- Modbus TCP network.

The Lexium 32M servo drive can only take one communication card.

### CANopen and CANmotion machine bus

#### Presentation

The CANopen machine bus is specifically designed for integration in control system architectures. It provides openness and interoperability for various devices (drives, motor starters, smart sensors, etc.).

A tiered CANopen connectivity solution reduces costs and optimizes the creation of the control system architecture, providing:

- Reduced cabling time
- Greater reliability of the load
- Flexibility should you need to add or remove equipment

It is very easy to set up.

The same communication card provides access to either the CANopen or CANmotion machine bus.

The characteristics of the cards are available on our website [www.schneider-electric.com](http://www.schneider-electric.com).

#### Optimized solution for connection to the CANopen/CANmotion machine bus

To simplify the setup of Lexium 32M servo drives, 3 communication cards are available, each with different connectors:

- CANopen/CANmotion daisy chain card with connection to the bus via 2 RJ45 connectors, providing an optimized solution for daisy chain connection to the CANopen machine bus (see page 15)
- CANopen/CANmotion card with connection to the bus via screw terminals (see page 15)
- CANopen/CANmotion card with connection to the bus via 9-way male SUB-D connector (see page 16)

Installing the CANopen communication card VW3A3608

## PROFIBUS DP V1 fieldbus

### Presentation

PF08928

VW3A3607 PROFIBUS DP V1 communication card

PROFIBUS DP is a fieldbus for industrial communication. The Lexium 32M servo drive is connected to the PROFIBUS DP V1 fieldbus via the VW3A3607 communication card. Other devices can be connected to the PROFIBUS DP V1 bus such as PLCs (1), STB I/O (2), Altivar variable speed drives (3), Osicoder rotary encoders (4), etc.

## EtherNet/IP network

### Presentation

VW3A3616 EtherNet/IP communication card

The EtherNet/IP network is a protocol specially designed for industrial environments. It uses the widely implemented Ethernet protocols TCP (Transmission Control Protocol) and IP (Internet Protocol), thus offering an integrated transparent connection system to the company network.

Thanks to its high speed, the network no longer restricts the application's performance. It is the pre-eminent open protocol and supports the following types of communication:

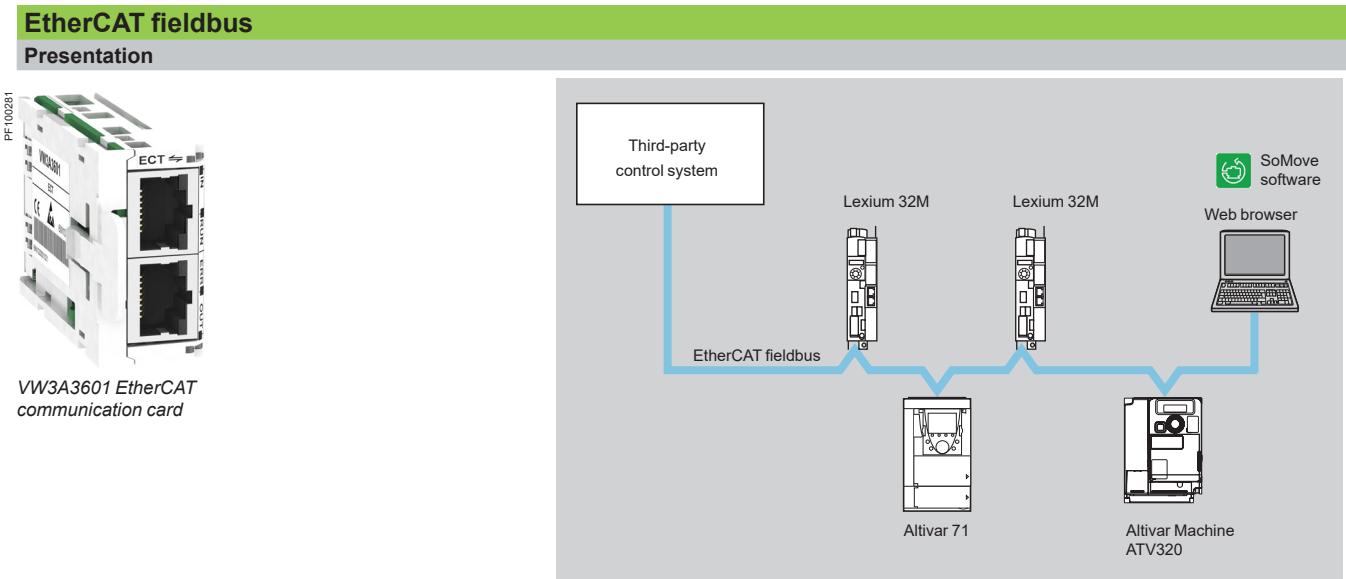

- Web pages
- File transfers
- Messaging

EtherCAT (EtherNet for Control Automation Technology) is an EtherNet-based open fieldbus system. This means that EtherNet technologies, such as embedded Web server, e-mail, and FTP transfer, can be used in the EtherCAT environment. The EtherCAT fieldbus is intended for applications requiring very short cycle times ( $\leq 250 \mu\text{s}$ ) with low jitter ( $\leq 1 \mu\text{s}$ ) for synchronization purposes. These characteristics enable the EtherCAT network to achieve very high performance levels in the control systems field, with low equipment costs.

## PROFINET fieldbus

### Presentation

VW3M3308 PROFINET communication card

PROFINET is an Ethernet-based fieldbus that allows you to network products from different manufacturers without the need for special interface adaptation.

The following functions can be performed via the fieldbus:

- Reading and writing parameters
- Reading and writing inputs and outputs
- Diagnostics and monitoring functions

Networking the product:

- The product is networked via an RJ45 interface and operates as an I/O device on the PROFINET network. Data is exchanged according to the producer-consumer model.

#### Modbus TCP network

##### Presentation

VW3A3616 Modbus TCP communication card

Different products with a Modbus TCP interface can be operated in the same fieldbus.

Modbus TCP provides a common basis for interchanging commands and data between the network devices.

The product supports the following functions via Modbus TCP:

- Automatic IP address assignment via BOOTP or DHCP
- Automatically obtaining configuration data via the FDR (Fast Device Replacement) service
- Commissioning via commissioning software
- Diagnostics and configuration via integrated Web server
- Reading and writing parameters
- Controlling the drive
- Monitoring inputs and outputs
- Diagnostics and monitoring functions

VW3M3401 resolver card

VW3M3402 encoder interface card  
(digital output)

VW3M3403 encoder interface card  
(analog output)

#### Presentation

The Lexium 32M servo drive can take an encoder interface card. This has an input available for an additional encoder, thus offering the following advantages:

- The ability to connect to third-party motors, which increases the installation's flexibility
- The ability to improve positioning accuracy by reducing the effect of mechanical backlash thanks to position measurement directly on the machine, and to meet the requirements of simple applications or complex systems that need a very quick response or very accurate path following

3 cards are available depending on the encoder technology:

- Resolver encoder
- Encoder with digital output
- Encoder with analog output

## Lexium 32 and Motors

### Lexium 32 Servo drives

Option: Encoder cards for Lexium 32M servo drives

incremental encoder

Absolute encoder

### Machine encoders for VW3M3402 encoder card

#### Presentation

To meet requirements for machine encoders, Schneider Electric recommends the XCC range of Opto-electronic rotary encoders, made by Telemecanique Sensors. The rotary encoders are connected to the VW3M3402 encoder interface card with digital output

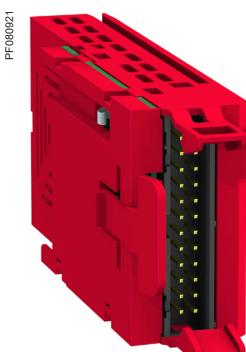

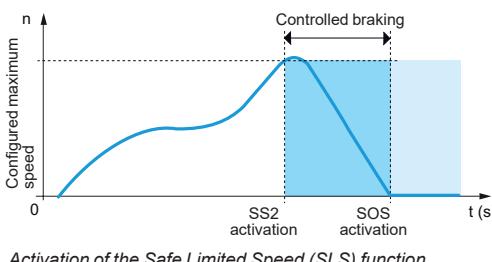

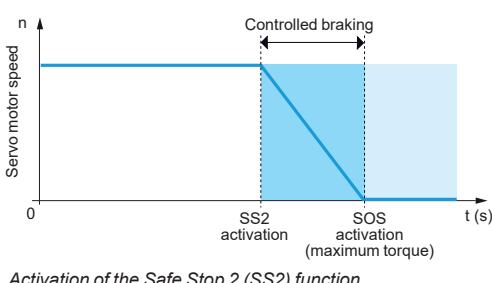

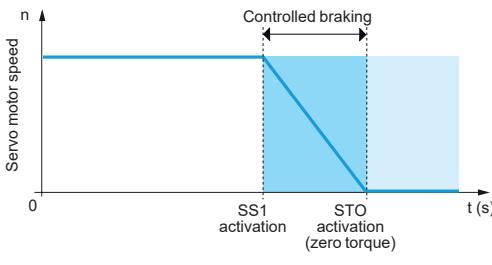

The XCC offer consists of incremental encoders and absolute encoders:

- The incremental encoder, with configurable resolution and A/B/I output signal
- The absolute encoders with SSI interface.

More information on XCC offer, Please consult [www.tesensors.com](http://www.tesensors.com) web-site.

A screenshot of the Telemecanique Sensors global website. The header features the company logo and navigation links for Products, Applications, Service &amp; Support, Distributors, Company, and a search bar. The main content area includes a banner for "Preventz XUSL Safety Light Curtains", a "Common Literature" section with a catalog link, a "News &amp; Innovations" section with a link to "Oscisense™ XS cube F1", and a "Find a Distributor" section. At the bottom, there's a "Trade Shows &amp; Events" section listing various trade shows and their dates.

VW3M3501 safety card

## Presentation

The eSM safety card allows Lexium 32 servo drives to access additional safety functions as well as the Safety Torque Off (STO) function. This offers a complex safety device that helps to provide installation monitoring.

The eSM card optimizes the overall cost of the installation by avoiding the need for additional external devices, while conforming to international safety standards. As a result, wiring is cheaper and quicker.

It also improves performance during maintenance by reducing machine or installation downtime and increases the safety of any work carried out.

The eSM card complies with the machinery standard ISO 13849-1, performance level "e" (PL e), functional safety standard IEC/EN 61508, SIL 3 capability, and functional safety standard IEC/EN 62061, SIL 3 capability.

It includes safety functions compliant with standard IEC/EN 61800-5-2. These functions, required in the majority of applications, are as follows:

- Safe Torque Off (STO)
- Safe Stop 1 (SS1)
- Safe Stop 2 (SS2)
- Safe Limited Speed (SLS)
- Safe Operating Stop (SOS)

## Safety functions

### Safe Stop 1 (SS1) function

The SS1 function is used to achieve a category 1 safe stop. After activation of the function, the servo motor is braked in a controlled manner, maintaining the power on the actuators. The power is then removed when the actuators stop after the machine has come to a halt.

### Safe Stop 2 (SS2) function

The SS2 function is used to achieve a category 2 safe stop. After activation of the function, the servo motor is braked in a controlled manner, maintaining the power on the actuators. Once the motor has come to a halt, it is kept at a standstill with the Safe Operating Stop (SOS) function.

### Safe Limited Speed (SLS) function

The SLS function is used to monitor the configured maximum speed. If this speed is exceeded, the servo motor will be stopped in accordance with SS2.

### Safe Operating Stop (SOS) function

The SOS function is used to monitor any deviation from the standstill position once the servo motor has come to a halt.

# Lexium 32 and Motors

## Lexium 32 Servo drives

Option: I/O expansion card for Lexium 32M servo drives

PF110930

VW3M3302 I/O expansion card

### Presentation

Lexium 32M (1) servo drives can be adapted for more complex or more extensive applications by installing an I/O expansion card.

It has the same functions as the Lexium 32M servo drive I/O.

The I/O expansion card is inserted into a dedicated slot (port no. 1). It is compatible with servo drives supporting version V01.06 minimum.

The card has logic and analog I/O:

- 4 x 24 V --- positive logic (Source) or negative logic (Sink) inputs
- 2 positive logic (Source) or negative logic (Sink) open collector outputs
- 2 software-configurable voltage (0...10 V ---) analog inputs, 14-bit resolution
- 2 software-configurable voltage (0...10 V ---) or current (0...20 mA) analog outputs, 12-bit resolution

### Reference

(1) Except with LXM32M servo drives with Sercos.

### **Presentation**

#### **Internal braking resistor**

A braking resistor is built into the servo drive to absorb the braking energy. If the DC bus voltage in the servo drive exceeds a specified value, this braking resistor is activated. The restored energy is converted into heat by the braking resistor.

It enables maximum transient braking torque.

#### **External braking resistor**

- When the servo motor has to be braked frequently, an external braking resistor is required to dissipate the excess braking energy. In this case, the internal braking resistor must be deactivated.
- Several external braking resistors can be connected in parallel. The servo drive monitors the power dissipated in the braking resistor.
- The degree of protection of the casing is IP 65 for VW3A7601R●● to VW3A7608R●● braking resistors, and IP 20 for **VW3A773●** braking resistors. The operating temperature around the unit can be between 0 and + 50 °C/+ 32 and + 122 °F.
- To optimize the size of the braking resistor, the DC buses on Lexium 32 servo drives in the same installation can be connected in parallel

### **Applications**

Machines with high inertia, driving loads, and machines with fast cycles.

### **References**

*Note:* The total continuous power dissipated in the external braking resistor(s) must be less than or equal to the nominal power of the Lexium 32 servo drive (see pages 8 and 9).

#### **Presentation**

A line choke can be used to provide improved protection against overvoltages on the line supply and to reduce harmonic distortion of the current produced by the servo drive.

The recommended chokes limit the line current.

They have been developed in line with standard IEC 61800-5-1 (VDE 0160 level 1 high-energy overvoltages on the line supply).

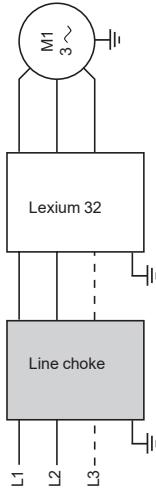

The inductance values are defined for a voltage drop between 3% and 5% of the nominal line voltage. Values higher than this will cause loss of torque.

These chokes must be installed upstream of the servo drive.

One line choke can be connected to a number of servo drives. In such cases, the current consumption of all the servo drives at nominal voltage must not exceed the nominal current of the line choke.

The use of line chokes is recommended in particular under the following circumstances:

- Close connection of several servo drives in parallel
- Line supply with significant disturbance from other equipment (interference, overvoltages)
- Line supply with voltage unbalance between phases that is more than 1.8% of the nominal voltage
- Servo drive supplied by a line with very low impedance (in the vicinity of a power transformer 10 times more powerful than the servo drive rating)
- Installation of a large number of servo drives on the same line
- Reduction of overloads on the  $\cos \varphi$  correction capacitors, if the installation includes a power factor correction unit.

# Lexium 32 and Motors

Lexium 32 Servo drives

Integrated EMC filters

Additional EMC input filters

Lexium 32 servo drive with additional EMC filter

## Integrated EMC filter

### Function

Lexium 32 servo drives have integrated radio interference input filters to comply with the EMC standard for variable speed electrical power drive "products" IEC/EN 61800-3, edition 2, category C3 in environment 2, and to comply with the European directive on EMC (electromagnetic compatibility).

### For servo drive

### Maximum servo motor cable length conforming to

EN 55011, class A, Gr2

IEC/EN 61800-3, category C3 in environment 2 (1)

Switching frequency: 8 kHz

m/ft

### Single-phase supply voltage: 115 V ~ 50/60 Hz

LXM32••••M2 20/65.62 (10 m/32.81 ft in category C2, environment 1)

### Single-phase supply voltage: 230 V ~ 50/60 Hz

LXM32••••M2 20/65.62 (10 m/32.81 ft in category C2, environment 1)

### Three-phase supply voltage: 380 V ~ 50/60 Hz

LXM32••••N4 20/65.62

### Three-phase supply voltage: 480 V ~ 50/60 Hz

LXM32••••N4 20/65.62

## Additional EMC input filters

### Applications

Used with Lexium 32 servo drives, additional EMC input filters can be used to meet more stringent requirements and are designed to reduce conducted emissions on the line supply below the limits of standard IEC/EN 61800-3 edition 2, category C2 or C3 (see page 29).

Additional EMC filters are mounted on the side of the device. They have tapped holes for mounting in an enclosure.

### Use according to the type of line supply

Integrated or additional EMC filters can only be used on TN (neutral connection) or TT (neutral to ground) systems.

Lexium 32 servo drives cannot be used on IT (impedance grounded or isolated neutral) systems. Standard IEC/EN 61800-3, appendix D2.1, states that on IT systems, filters can cause permanent insulation monitors to operate in a random manner.

If a machine has to be installed on an IT system, an isolation transformer must be inserted in order to re-create a TT system on the secondary side.

(1) Standard IEC/EN 61800-3: EMC immunity and conducted and radiated EMC emissions:  
- Category C3 in environment 2: industrial premises.

Additional EMC filter mounted on a Lexium 32M servo drive

- Category C3 in environment 2: industrial premises.

**Applications**

The combinations listed below can be used to create a complete motor starter unit comprising a contactor and a Lexium 32 servo drive.

The contactor turns on and manages any safety functions, as well as isolating the servo motor on stopping.

The servo drive controls the servo motor, provides protection against short-circuits between the servo drive and the servo motor, and helps to protect the motor cable against overloads. The overload protection is provided by the motor thermal protection of the servo drive.

BMH servo motor with straight connectors

BMH servo motor with rotatable elbow connectors

### Presentation

BMH servo motors provide excellent power density values to meet the requirements of compact machines. With four flange sizes and three different lengths for each flange size, they are suitable for many applications, covering a continuous stall range from 1.2 to 84 Nm for speeds up to 8,000 rpm.

The new BMH servo motors have a medium inertia motor, which means they are particularly suitable for high-load applications. They help to simplify installation and adjustment through a more robust adjustment of the movement.

BMH servo motors are UL Recognized and conform to standard UL1004 as well as to European directives (CE marking).

They are available with the following variants:

- 5 flange sizes: 70, 100, 140 and 190 mm/2.76, 3.94, 5.51 and 7.48 in.
- 2 degrees of protection for the shaft end: IP 50 or IP 65 (IP 67 with the conformity kit, which is available as an option) in accordance with standard IEC/EN 60529. The degree of protection of the casing is IP 65 (IP 67 with the conformity kit, which is available as an option).
- With or without holding brake
- Straight or elbow connectors for power and encoder connection
- Integrated single-turn or multi-turn SinCos Hiperface® encoder (medium or high resolution)
- Smooth or keyed shaft end

### Special features

BMH servo motors have been developed to comply with the following main specifications:

- The ambient operating temperature is - 20...+ 40 °C / - 4...+ 104 °F without derating, in accordance with standard IEC 60721-3-3, category 3K3, and up to 55 °C/131 °F with derating of 1% of the nominal output power per additional °C above 40 °C/104 °F.
- The maximum operating altitude is 1,000 m/3,280 ft without derating, 2,000 m/6,561 ft with  $k = 0.86$ , and 3,000 m/9,842 ft with  $k = 0.8$  (1).
- The relative humidity that the servo motor can withstand is in line with standard IEC 60721-3-3, categories 3K3, 3Z12, and 3Z2.
- The windings are insulation class F (maximum temperature for windings 155 °C/311 °F) in accordance with standard IEC 60034-1.
- Thermal protection is provided and controlled by the Lexium 32 servo drive via the motor temperature control algorithm.
- All mounting positions are permitted (horizontal mounting (IMB5) or vertical mounting (IMV1 with shaft end at the top and IMV3 with shaft end at the bottom) in accordance with standard IEC 60034-7.

### Sizing

The Lexium Sizer tool is available on our website [www.schneider-electric.com](http://www.schneider-electric.com) to help you size your servo motor.

(1)  $k$ : derating factor

**Presentation (continued)**

**Holding brake**

BMH servo motors can be equipped with an electromagnetic holding brake.

**⚠ Do not use the holding brake as a dynamic brake for deceleration, as this will quickly damage the brake.**

**Integrated encoder**

BMH servo motors are equipped as standard with an absolute encoder.

This encoder performs the following functions:

- Gives the absolute position of the motor so that flows can be synchronized
- Measures the servo motor speed via the associated Lexium 32 servo drive (this information is used by the servo drive's speed controller)
- Measures the position information for the servo drive's position controller
- Sends data from the servo motor to the servo drive, which provides automatic identification of the motor when the servo drive starts

Four types of encoder are available:

- High resolution SinCos Hiperface® encoder:
- Single-turn (131,072 points/turn) (1)
- Multi-turn (131,072 points/turn x 4,096 turns) (1)

These encoders give an angular shaft position precise to less than  $\pm 1.3$  arc minutes.

- Medium resolution SinCos Hiperface® encoder:
- Single-turn (32,768 points/turn) (1)
- Multi-turn (32,768 points/turn x 4,096 turns) (1)

These encoders give an angular shaft position precise to less than  $\pm 4.8$  arc minutes.

**Description**

BMH servo motors, with a 3-phase stator and a 10-pole rotor with Neodymium Iron Boron (NdFeB) magnets, consist of:

- 1 Casing with RAL 9005 opaque black paint protective coating
- 2 A 4-point axial mounting flange
- 3 A smooth or keyed shaft end (depending on the model)
- 4 A threaded sealed male straight connector for the power cable (2)
- 5 A threaded sealed male straight connector for the control cable (encoder) (2)

**Cables and connectors to be ordered separately**, for connection to Lexium 32 servo drives (see page 36).

Schneider Electric has taken particular care over the compatibility of BMH servo motors and Lexium 32 servo drives.

This compatibility is only possible when using cables and connectors sold by Schneider Electric (see page 36).

(1) Encoder resolution given for use with a Lexium 32 servo drive.

(2) For other model with rotatable elbow connector, see page 34.

# Lexium 32 and Motors

BMH servo motors

Option: Integrated holding brake

Option: Integrated encoder

## Holding brake

### Presentation

The holding brake integrated in the BMH servo motor is an electromagnetic pressure spring brake that blocks the servo motor axis once the output current has been turned off.

In the event of an emergency, such as a power outage or an emergency stop, the drive is immobilized.

Blocking the servo motor axis is also necessary in cases of torque overload, such as in the event of vertical axis movement.

As standard, the Lexium 32 servo drive has a holding brake controller to amplify the braking control signal and help ensure the brake is deactivated quickly. The controller then reduces the control signal so as to decrease the power dissipated by the holding brake.

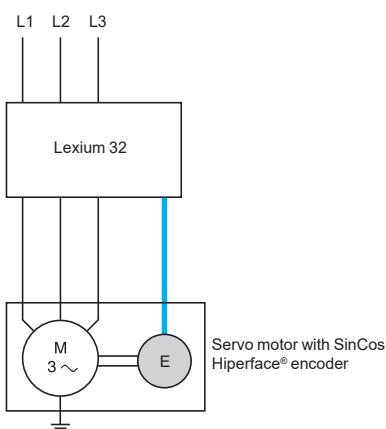

*BMH servo motor*

## References

To select a BMH servo motor with or without holding brake, see the references on page 34.

For any additional information about holding brake characteristics, visit our website [www.schneider-electric.com](http://www.schneider-electric.com).

## Integrated encoder in BMH servo motors

### Presentation

The standard measurement device is the SinCos Hiperface® single-turn or multi-turn encoder integrated in BMH servo motors. This measurement device is particularly suited to the Lexium 32 range of servo drives.

Depending on the model, single-turn and multi-turn SinCos encoders are available with medium resolution and capacitive sensing, or high resolution and optical sensing.

Use of this interface enables:

- Automatic identification of BMH servo motor data by the servo drive
- Automatic initialization of the servo drive control loops, thus simplifying installation of the motion control device

*BMH servo motor*

## References

To select the type of SinCos Hiperface® encoder integrated in the BMH servo motor (single-turn or multi-turn), see the references on page 34.

For any additional information about integrated encoder characteristics, visit our website [www.schneider-electric.com](http://www.schneider-electric.com).

BSH servo motor with rotatable angled connectors

BSH servo motor with straight connectors

BSH servo motor with rotatable angled connectors

### Presentation

BSH servo motors offer an excellent solution to the need for high dynamic performance. With five flange sizes and a variety of lengths, there is a suitable solution for many applications, covering a continuous stall torque range from 0.5 to 33.4 Nm for speeds up to 9,000 rpm.

Thanks to their new winding technology based on salient poles, BSH servo motors are far more compact and offer a higher power density than conventional servo motors.

BSH servo motors are UL Recognized and conform to standard UL1004 as well as to European directives (CE marking).

They are available with the following variants:

- 5 flange sizes: 40, 55, 70, 100, and 140 mm/1.57, 2.28, 2.76, 3.94, and 5.51 in.
- 2 degrees of protection for the shaft end: IP 50 or IP 65 in accordance with standard IEC/EN 60529. The degree of protection of the casing is IP 65 (IP 67 with the conformity kit, which is available as an option).
- With or without holding brake
- Straight or elbow connectors for power and encoder connection
- Integrated single-turn or multi-turn SinCos Hiperface® encoder (medium or high resolution)
- Smooth or keyed shaft end

### Special features

BSH servo motors have been developed to comply with the following main specifications:

- Ambient operating temperature: - 20...+ 40 °C / - 4...+ 104 °F without derating, in accordance with standard IEC 60721-3-3, category 3K3, and up to 55 °C/131 °F with derating of 1% of the nominal output power per additional °C above 40 °C/104 °F.
- Maximum operating altitude: 1,000 m/3,280 ft without derating, 2,000 m/ 6,561 ft with k = 0.86, and 3,000 m/9,842 ft with k = 0.8 (1).
- The relative humidity that the servo motor can withstand is in line with standard IEC 60721-3-3, categories 3K3, 3Z12, and 3Z2.
- The windings are insulation class F (maximum temperature for windings 155 °C/311 °F) in accordance with standard IEC 60034-1.
- Mounting positions permitted: horizontal mounting (IMB5) or vertical mounting (IMV1 with shaft end at the top and IMV3 with shaft end at the bottom) in accordance with standard IEC 60034-7.

### Sizing

The Lexium Sizer tool is available on our website [www.schneider-electric.com](http://www.schneider-electric.com) to help you size your servo motor.

(1) k: derating factor

**Presentation (continued)**

**Holding brake**

BSH servo motors can be equipped with an electromagnetic holding brake.

**⚠ Do not use the holding brake as a dynamic brake for deceleration, as this will quickly damage the brake.**

**Integrated encoder**

BSH servo motors are equipped with a single-turn (131,072 points/turn) (1) or multi-turn (131,072 points/turn x 4,096 turns) (1) SinCos Hiperface® high-resolution absolute encoder giving an angular shaft position precise to less than  $\pm 1.3$  arc minutes.

This encoder performs the following functions:

- Gives the absolute position of the motor so that flows can be synchronized
- Measures the servo motor speed via the associated Lexium 32 servo drive (this information is used by the servo drive's speed controller)
- Measures the position information for the servo drive's position controller
- Sends data from the servo motor to the servo drive, which provides automatic identification of the motor when the servo drive starts

**Description**

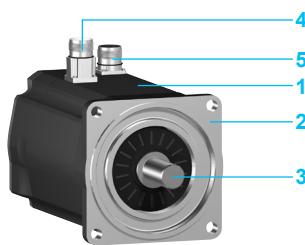

BSH servo motors, with a 3-phase stator and a 6 to 10-pole rotor (depending on model) with Neodymium Iron Borium (NdFeB) magnets, consist of:

- 1 Casing with RAL 9005 opaque black paint protective coating
  - 2 A 4-point axial mounting flange
  - 3 A smooth or keyed shaft end (depending on the model)
  - 4 A threaded sealed male straight connector for the power cable (2)
  - 5 A threaded sealed male straight connector for the control cable (encoder) (2)
- Cables and connectors to be ordered separately**, for connection to Lexium 32 servo drives (see page 44).

Schneider Electric has taken particular care over the compatibility of BSH servo motors and Lexium 32 servo drives. This compatibility is only possible when using cables and connectors sold by Schneider Electric (see page 44).

(1) Encoder resolution given for use with a Lexium 32 servo drive.

(2) For other model with rotatable elbow connector, see page 43.

### BSH servo motors

The BSH servo motors shown below are supplied without a gearbox.

For gearboxes, please consult "GBX and GBY planetary gearboxes" catalog or on our web site [www.schneider-electric.com](http://www.schneider-electric.com)

### Holding brake

#### Presentation

The holding brake integrated in the BSH servo motor is an electromagnetic pressure spring brake that blocks the servo motor axis once the output current has been turned off.

In the event of an emergency, such as a power outage or an emergency stop, the drive is immobilized.

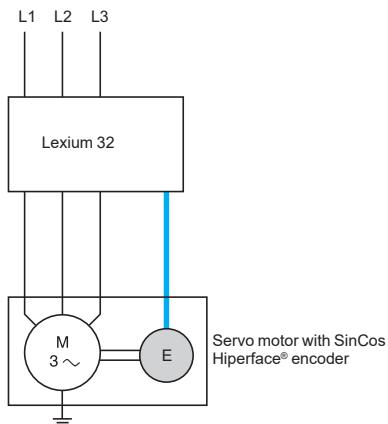

Blocking the servo motor axis is also necessary in cases of torque overload, such as in the event of vertical axis movement.

As standard, the Lexium 32 servo drive has a holding brake controller to amplify the braking control signal and help ensure the brake is deactivated quickly. The controller then reduces the control signal so as to decrease the power dissipated by the holding brake.

#### References

To select a BSH servo motor with or without holding brake, see the references on page 43.

For any additional information about holding brake characteristics, visit our website [www.schneider-electric.com](http://www.schneider-electric.com).

### Integrated encoder in BSH servo motors

#### Presentation

The standard measurement device is the SinCos Hiperface® single-turn or multi-turn encoder integrated in BSH servo motors. This measurement device is particularly suited to the Lexium 32 range of servo drives.

Use of this interface enables:

- Automatic identification of BSH servo motor data by the servo drive
- Automatic initialization of the servo drive control loops, thus simplifying installation of the motion control device

#### References

To select the type of SinCos Hiperface® encoder integrated in the BSH servo motor (single-turn or multi-turn), see the references on page 43.

For any additional information about integrated encoder characteristics, visit our website [www.schneider-electric.com](http://www.schneider-electric.com).
